To Whom It May Concern:

After taking a class about our water in college, I have learned a great deal about our lakes and rivers. It is very inspirational to see people caring about our water, and getting out there and educating others about it. After reading about B+ Plan, I agree that a firm deadline needs to be adopted in order to implement this plan. This plan will help to create a healthier environment and benefit many who use the lake or river. Why not do something that will benefit our environment and those who make use of the water? I think there needs to be less talk and more action done. I feel very strongly that this needs to happen right away.

Sincerely,
Elizabeth Ori
